I haven't written a formal law blog post in awhile and the time seems appropriate to me. The Constitution is the founding document of the United States and sets out the principle structures of the federal government. The document was ratified by convention in 1788 and became effective on 3 March 1789. The United States have thirty-nine articles in the original constitution. I tried to include as many as I could, but I couldn't include most of them. I am generally against the use of acronyms in writing, but acronyms are used here because they seem to be a popular way of referring to the Constitution in most American's everyday lives. The original Constitution of the United States (1787) The Original Constitution is the United States founding document, which was ratified by the states in 1787. The United States is a constitutional republic with limited federal government and a strong national defense. There are 29 total articles in the Constitution. For a breakdown of how the articles are numbered, see the header of the Wikipedia article. The original text is a little bit hard to read and makes me wonder if the United States was still that young. Here's what's in the original text, Article I. For ease of reading, I've bolded the highlighted sections. Article I Section 1 All legislative powers shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives. Section 2 The House of Representatives shall be composed of Members chosen every second year by the people of the several States. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures. Section 3 No State shall, without the Consent of the Congress, lay any duty of Tonnage, keep troops, or ships of War in time of
