The AutoCAD.NET API is not available to third parties as of AutoCAD 2014. The ability to export CAD drawings to any format depends on which CAD app is used to perform the export. There are plug-ins that will export drawings into web browser directly from AutoCAD, allowing users to search, view and modify drawings while using a web browser. These are available on the AutoCAD App Store as well as other sources. The ability to work directly with Excel spreadsheets is available only through the AutoCAD eXpress product. AutoCAD provides multiple ways to work with its database, A360, which contains information about the current drawing and annotations. This includes being able to list out all the annotated objects or just filter them based on the type of annotation. Layers and views are also available for creation. User-defined variable support may be added via User Defined Functions. The AutoCAD.NET API allows programmers to access the base methods in the software library. A built-in base class library (BCL) is provided that allows for working with the API. The ability to import models from other CAD software is limited, since the process is not standardized and involves many factors such as the type of model, size, compatibility, geometry and other factors. AutoCAD does support many different file types, including.dwg,.dxf,.ghm,.nra and others. There are other products that will read these file types. History AutoCAD was developed at Autodesk. Since then it has evolved and been further developed by Autodesk and third-party developers. Some third party products are listed on the Autodesk App Store. In 2006 Autodesk released AutoCAD 2007 with a focus on the business processes for the architect, engineer and land surveyor (AES). A new user interface was added to provide better working environment for these professions. The latest release, AutoCAD 2010, is a complete redesign of the software.
