Perse Computer Explorer With Serial Key

===== Perse Computer Explorer is a small utility designed to function as an independent system explorer that can take some time off your internal searches. Simple and intuitive UI The UI keeps it as simple as possible; upon first boot, the app will detect all your partitions and will go forth from there. If you check out the toolbar, you can see that all OS functions are squeezed in several combo menus, as "View, Folder, Tools." Furthermore, if you dislike the white default background, you can go to change the color so you can take some stress off your eyes, or simply give it your style. Search and opens apps, documents or images directly from the app After the partitions were displayed, you can dig in and manage your files. If you are getting lost in a large number of files and the back button is taking you where you want, click the "My Computer" icon and instantly reach the partitions screen. Moreover, if you go to "Tools" you can find a couple of tools that lets you execute more advanced actions. For example, you have a small task manager called "processes" from where you can verify your active apps; a "Startup Manager" from where you can add or remove programs scheduled to start at the same time with the OS, and also an integrated "Recycle Bin" that lets you delete files. No installation required Perse Computer Explorer requires no installation in order to function. You need only to extract it and run it. This is a good feature for users that manage more than one computer. Upload the archive on a disk or a USB flash drive and use it on any number of PC's you want without worrying about written information or registries. All in all, Perse Computer Explorer is a neat application that comes in handy for users that want a shortcut to the OS most basic process. Its easy-to-use interface makes the tool operable to any users no matter the technical skills. Perse Computer Explorer Download Link Free Windows 10 themes, wallpapers, icons, ringtones, and much more Windows 10 is the latest operating system from Microsoft, which is designed to include a lot of new features. System Requirements For Perse Computer Explorer:

OS: Windows Vista, Windows 7, Windows 8, Windows 8.1 Processor: Dual Core 2GHz or better Memory: 1 GB RAM Graphics: 1 GB graphics card or better Storage: 500 MB available space I have Windows 7 Professional and I have installed the required files and made a shortcut to the exe file as instructed. The shortcut runs and the program does not appear in the start menu. Can anyone point me in the right direction as to why this is not working? (0 votes) Click to vote Click
