### What's New in the AutoCAD?

Draft Management: Help find repetitive design decisions with the new Draft Management section. Find documents and text information from your Drafts folder that aren't yet incorporated in your current drawing and create variants of the existing drawings. AutoCAD Improvements: Find design inspiration for your next project with the new Design Palettes section. Designers can now find classic designs, get started with new, real-world projects, and review any design in the database. Additional Features: Edit your drawings more easily with improved Undo and Redo features. New shortcut commands allow for more efficient text editing, while the Customize User Interface option allows users to make adjustments to the user interface. Veno-occlusive disease following allogeneic bone marrow transplantation for acute lymphoblastic leukemia. We describe a 14-year-old girl with acute lymphoblastic leukemia who developed pulmonary arterial and venous thrombosis and a pulmonary veno-occlusive disease (PVOD) following allogeneic bone marrow transplantation (BMT) with a sibling donor. The risk of PVOD following allogeneic BMT is considerably increased with T-cell-depleted transplants and graft-versus-host disease. The exact pathogenesis of PVOD remains unclear. However, it is postulated that graft-versus-leukemia effects play an important role. In this patient, PVOD was suspected when radiographic findings of bilateral pulmonary hypertension developed 3 weeks after transplantation. The pulmonary vascular changes were associated with a rapid clinical deterioration. The clinical course was complicated by a veno-occlusive crisis and severe pneumonia. We speculate that the development of PVOD was triggered by severe pulmonary hypertension and capillary leak induced by graft-versus-host disease.

Orientation dependence of magnetoelectric effects in antiferromagnetic multiferroics. Using the Landau-Lifshitz-Gilbert equation, we study the magnetoelectric response of a layered antiferromagnet with spin cycloidal and spin helical ground states. We find that a finite magnetoelectric coupling can be obtained even in the absence of magnetostriction, and show that this coupling can vary strongly with the orientation of the magnetic field and the electric field. This orientation dependence can be either parallel or perpendicular to the direction of the spin spiral planes. The magnetoelect
