## Arduino Uno Driver Download

December 14, 2017 - I have an Arduino Uno based project that needs to be deployed and I only want to install the driver for Arduino with the install package for Windows... I tried to install the Arduino Uno on Ubuntu 14.04 using a bash script, but it doesn't work. I also tried installing Arduino Uno on Ubuntu 14.04 using apt-get but it fails stating "installation failed or could not be found". I also tried this method: Ubuntu: Install Arduino Uno (Debian package) It doesn't work and I certainly don't want to use this system for development, but I need a driver for the Uno. Is there another way to install this driver for Uno?
