Currently, the only Adobe product that doesn't offer on-screen features is Photoshop Elements. What Photoshop Really Does Although Photoshop is very popular, it does a lot more than photograph, illustration, or web design — it's also a serious graphics creation program with creative tools for retouching, compositing, and editing images. Photoshop also offers tools for web design and animation. Say you're a graphic designer working on a business card design. You've already created the basic card, but you want to refine its design. You want to replace the stock images with your own images, change the colors, and even add some trendy design elements. And let's say you'd like to create a photo that can be used in a newsletter, brochure, and Web page. You'd want to add some text, give it some frames, and print it for distribution. The following sections break down what Photoshop really does. See Chapter 6 to find out more about choosing and using different types of brushes. Creating and editing raster images Photoshop is used for creating and editing raster images. Raster images are digital images that contain pixels. A pixel is a picture element. A pixel acts the same as a dot in a printed photograph or a dot on a computer monitor. Pixels are in a solid color or they can be blended together to create texture. No matter what the medium, pixels of different shades define the edges of the image. Adobe Photoshop has a pixel-based editing system that's very similar to the way a scanner works. The user creates a photo by scanning actual objects that he or she has photographed or scanned elsewhere. The photo is then pixel-based, which means that every location can be changed. In Photoshop, you have to be a very organized user to maintain your photo files the way they should be. The file must be in one of the following file types: TIFF, PSD, or 8-bit PNG. (For the sake of this book, we use and recommend PSD.) If you choose to create a file in the 8-bit PNG format, Photoshop gives you more options, but your file size will be larger. So the choice is yours, and you'll need to decide whether you want to lose some image quality by using a smaller file or whether you're just holding on to the file for archival purposes. Either way works. As part of your set-up routine, you need to make a

I've always thought that "fabrico" is used to designate something that produces something and "fábrica" is used to designate a place or a business that produces something. Are both correct, are both incorrect or do they have different meanings? The ones I've seen tend to use "fabrico" for a place and "fábrica" for a business. A: In this case fábrica is the correct word, as it is a business, but the use of the case to differentiate between the two would be fabrica (fabrica de arte) vs fabrico (fábrica de artículos). I'm not sure if you would use "fabrica de calzados" or just "fabrica" in the context of a business. FILED NOT FOR PUBLICATION DEC 16 2009

## What's New In?

Share this: Usually, I don't post twice in a day on the same topic, but I do think you all deserve a double feature on Hyperhidrosis. Can you be more on topic? The first one is an article on preventative methods, explaining that the problem is caused by hyperactive sweat glands, often being genetic. Treatments are also discussed, but with a dose of scepticism. This was followed by "Confessions of a hyperhidrotic" by Sophy Cist, and the first person who described her problem as "hyperhidrosis". It's an excellent read, and well written. However, she doesn't deal with the issue of how to cope with it. It's obvious that the condition bothers her a lot, and explains that she has tried many different treatments. This leads me to the second article in today's post: "Expert Advice On Hyperhidrosis Treatment" by the same author. She continues to explain the symptoms and treatments, but this time also includes more positive aspects. She goes on to provide a list of the most important results of the treatment, and the price of the treatments. She concludes with links and some other good information. Sophy's article was interesting, and I think it's a very good starting point for people who are on the verge of breaking down and getting treatment. If you're interested in how to cope with it, a good place to start would be to look in the (possibly relatively small) article on "Hyperhidrosis treatments". Unsurprisingly, there was a response from one of the doctors mentioned in the article, Dr. Okonofu. It's hard to judge, because on the one hand, a doctor's opinion is a doctor's opinion. On the other hand, this person had a day or two to respond, and certainly made some very strong points. (As a reminder, this isn't a charity or a political forum, and I'm not sharing my opinion on the wider topic. This is purely about a certain doctor and his views on the topic.) A few points that I thought worth sharing: First: The most important thing about treating a patient is to try and find out what's causing the problem. This is usually not hard. A few years ago, I
