[^] How can I make this? A: Your url element contains no spaces between the segments. Hence, you're seperating the string at commas, and splitting at commas, because you're using field.split(","). You need to add spaces inbetween your segments. As a result, you can now use field.split(" "). Note: the double-dash is a Unix convention. I don't know if it is required in Java load("@io_bazel_rules_go//go:def.bzl", "go_library", "go_test") package(default_visibility = ["//visibility:public"]) go_library(name = "go_default_library", srcs = ["doc.go", "intstr.go",], importpath = "k8s.io/apiserver/pkg/registry/generic/registry/node", deps = ["//vendor/k8s.io/apimachinery/pkg/api/errors:go_default_library", "//vendor/k8s.io/apimachinery/pkg/runtime:go_default_library", "//vendor/k8s.io/apiserver/pkg/registry/rest:go_default_library", "//vendor/k8s.io/apiserver/pkg/storage/etcd/condition:go_default_library", "//vendor/k8s.io/apiserver/pkg/util/intstr:go_default_library",],) go_test(name = "go_default_test", srcs = ["intstr_test.go"],

Netflix's Stranger Things pretty much defined what the 80s were all about. So, for the third year in a row, we're going to be exploring the key elements of one of the most iconic decades ever. And for that, we're going to be looking back at the things that made the 80s so iconic. So let's begin by discussing one of the most iconic movies that happened in the 80s: HALLOWEEN (1978). Let's not mince our words here. HALLOWEEN, to me, is the greatest movie of all time. And I'm going to go out on a bit of a limb here and say that if you haven't seen it, you haven't lived. It is, to be frank, one of the greatest pieces of cinematic entertainment that I have ever seen. It's mad scary, brilliantly written, brilliantly directed, and a brilliant idea that became a cultural phenomenon. If you've never seen it, do it. Trust me. To illustrate the point, let's look at a few facts: 90 minutes and 26 seconds is the length of HALLOWEEN (1978). You can watch it that fast, and it still blows your mind. But

Salmonella enterica is a foodborne pathogen and is a cause of serious foodborne disease in humans. Different subspecies within S. enterica have been identified as being responsible for causing disease in animals and humans. The purpose of this study was to identify Salmonella enterica isolates from different sources and to

characterize genetically the subspecies present in these isolates using the polymerase chain reaction, single-locus sequence typing (SLST), and the variable number tandem repeats (VNTR) technique. A total of 354 isolates from different sources in Mie Prefecture, Japan were tested. S. enterica isolates were identified by amplification of the Salmonella-specific gene (invA) and the eggwhite lipopolysaccharide (wzx) gene. Based on the results, 140 isolates were identified as Salmonella enterica by invA and 20 isolates were identified as Salmonella enterica by wzx. Of the 140 isolates identified as S. enterica by invA, 121 isolates were identified as subspecies enterica. Of the twenty isolates identified as S. enterica by wzx, all were of subspecies enterica. VNTR analysis was also performed for eleven isolates, of which ten were identified by invA and one by wzx. Two loci (
